Hospitality

Customer
A hotel management company

Customer need
The customer needed to track and record real-time details of their employees' activities while working in the hotel, ensuring efficient and accurate monitoring of tasks.
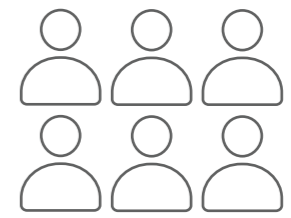

New Workflow with allGeo
To meet this need, the allGeo application was used. The setup process included configuring employee details by navigating to the Company section, selecting an employee, and entering necessary information like the phone number.

Employees began their day by opening the allGeo app and pressing "Start Shift." They ended their shift by pressing "End Shift." During their shift, employees scanned QR codes for tasks using the app, ensuring real-time task recording.

Several key reports supported this workflow. The Standard Manual Report checked the hours employees spent between shifts. The Message Report detailed QR code scans, and the Breadcrumb Report tracked employee locations during the day

Here are the reports that were generated:

- **Standard Manual Report :** This report shows the punch-in and out records along with the total hours and miles.

- **Message Report :** This report will show all the messages and attachments taken in the fields like forms, notes, images, etc.

- **Breadcrumb Report :** This report will give you all the location trails of the employees for that particular date range.
